The installation completed successfully.
To get started, open a terminal window and enter "ibmcloud help". Refer to "http://ibm.biz/cli-auto-completion" if you want to enable auto-completion for zsh or bash.

IBM Cloud CLI has a plug-in framework to extend its capability. To install the recommended plug-ins and dependencies, run the install script from "http://ibm.biz/install-idx". For additional plug-in details, see "http://ibm.biz/install-cli-plugin".

Starting from version 1.0.0, the IBM Cloud CLI no longer bundles the Cloud Foundry CLI by default. To run Cloud Foundry commands via the IBM Cloud CLI, install the Cloud Foundry CLI by using the 'ibmcloud cf install' command.

To uninstall, run "/usr/local/ibmcloud/uninstall"
[zerogzero Bluemix_CLI]$ ibmcloud
